PROFILE

Class 10 student and aspiring software developer who enjoys turning practical problems into useful digital tools. Builds projects across web development, Python automation, desktop applications and AI-assisted workflows. Focused on learning by building, writing maintainable software, and creating clear, user-friendly experiences.

SELECTED PROJECTS

NovaPlay — Broadcast Automation System
Developed an Electron-based broadcast playout application concept with playlist management, media scheduling, automation workflows and persistent local storage.

Study Challenge CLI
Built a Python command-line study tool with weighted topic selection, cooldown logic, timed challenges and persistent progress tracking across 300+ study topics.

LearnLens AI
Exploring an education-focused platform designed to help identify learning gaps and support more targeted study through diagnostic insights.

PrintU
Designed a printing workflow tool concept to simplify common tasks such as page ranges, odd/even-page printing and multiple-pages-per-sheet layouts.

Teachers Day 2026
Created a school celebration web experience to support a school event with a purpose-built, interactive interface.

TECHNICAL SKILLS

Programming	Python, TypeScript/JavaScript
Web	Next.js, React, Tailwind CSS, responsive UI
Applications	Electron, command-line tools, desktop app workflows
Tools & Platforms	Git, GitHub, VS Code, Supabase, API integration
Areas of Interest	AI/ML, automation, software design, learning technology

EDUCATION

Class 10 Student | Gateway International High School

Currently building foundations in technology through school learning and independent project work.

STRENGTHS

Problem-solving • Self-directed learning • Consistency • Curiosity • Project building • Leadership and initiative • Clear, user-focused thinking
